**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of a polymer electrolyte formed of formula 1 and formula 2 where A is  $-\text{CO}-$ ; W is  $-\text{CO}-$ ; T is  $-\text{C}(\text{CF}_3)_2-$ ; R1-R8 are all H, and L is 1 in the reply filed on 12-21-06 is acknowledged. The elected species has been found allowable.

***Claim Rejections - 35 USC § 112***

2. Claims 1-4, 6-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is rejected because an electrode structure does not include a polymer electrolyte therefore claim 1 should be claiming a fuel cell comprising an electrode, the counter electrode and a polymer electrolyte.

Claims 6-7 are rejected because of the language "uses". This makes the claims vague and indefinite. The claims should instead cite "An electrical device comprising a polymer electrolyte" or "A transportation device which comprises a polymer electrolyte".

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1745

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Rozhanskii et al. (7,163,988).

Rozhanskii et al. teaches a proton-conductive membrane for a fuel cell in which the membrane comprises a polymer solid electrolyte comprising a polyarylene having a sulfonic acid group. Rozhanskii et al. teaches in column 3, that the polyarylene comprises repeating structural units derived from an aromatic compound which contains at least repeating structural units represented by the formula (1').

***Allowable Subject Matter***

5. Claim 5 is allowed.
